

Samy Baouche

111 – 111 – 1111 | samy.baouche@gmail.com | [LinkedIn](#) | [GitHub](#)

Software Engineering student at Concordia University with hands-on experience in backend development, cloud infrastructure, and DevOps. Built and deployed full-stack and microservice-based applications using AWS, Kubernetes, and modern backend technologies, with a focus on scalable, reliable, and production-oriented systems.

EDUCATION

Concordia University | Bachelor of Engineering - Software Engineering & Member of the Co-op Institute Montreal, QC Sept. 2025 – May 2029

Collège Bois-de- Boulogne | DEC in Mathematical Science and Computer Science Montreal, QC Aug. 2022 – May 2025

EXPERIENCE

@HACK 2026 Cybersecurity CTF

March 2026

- Ranked 1st in the Interac Beginner category during the @HACK cybersecurity CTF competition

CERTIFICATION

AWS Certified Cloud Practitioner

Expected May 2026

- Cloud fundamentals, AWS services (IAM, EC2, S3, RDS), architecture, security, deployment

PROJECTS

NeuroOps | Go, Kubernetes, Terraform, Docker, AWS, GitHub Actions, Prometheus, Grafana | [GitHub](#)

May 2026 – **Present**

- Built a cloud-native Kubernetes observability and self-healing platform using Go, Docker, Terraform, and AWS.
- Developed Go API endpoints for health checks, readiness checks, failure simulation, and CPU load testing.
- Deployed the service on Kubernetes with liveness/readiness probes to enable automated recovery and safer traffic routing.
- Implemented Horizontal Pod Autoscaling to scale workloads from 1 to 5 pods under CPU pressure.
- Automated CI/CD with GitHub Actions for Go testing, Docker image builds, and AWS ECR publishing through GitHub Secrets.
- Integrated Prometheus, Grafana, and a Cobra/Bubble Tea CLI-TUI to monitor workloads and run operator diagnostics.

ZeroTrustCloud | Java, Spring Boot, React, TypeScript, PostgreSQL, Docker, AWS, Git | [GitHub](#)

April 2026 – **Present**

- Engineered a full-stack Zero Trust cloud security platform with real-time access control based on contextual risk scoring
- Developed a secure JWT-based authentication and authorization system
- Designed a policy engine supporting adaptive responses (ALLOW / CHALLENGE / DENY)
- Built backend services for logging, alerting, and policy enforcement
- Deployed a scalable cloud architecture on AWS (EC2, ECS, RDS, CloudWatch)
- Processed authentication requests with real-time policy evaluation and enforcement

CourseFlow | HTML, CSS, JavaScript, SQLite/PostgreSQL, Git, Node.js | [GitHub](#)

Feb 2026 – April 2026

- Developed a web platform allowing students to manage courses, track grades, and view upcoming assessments in a centralized dashboard.
- Implemented grade tracking with automatic average calculations and visual progress indicators.
- Built a Node.js + SQL backend with secure authentication and persistent data storage

EcoNova | Python, Django, HTML, CSS, JavaScript, SQLite/PostgreSQL, Git, Google Gemini API | [GitHub](#)

Jan 2025 – May 2025

- Engineered a full-stack financial web application using Python and Django, featuring secure user authentication and a relational database to track budgets and transactions.
- Designed a multi-module user experience integrating stock portfolio views, scenario-based financial simulations, and educational content.
- Prototyped an AI financial chatbot to provide personalized budgeting recommendations, and managed the project lifecycle using GitHub, class diagrams, and Gantt charts.

TECHNICAL SKILLS

Languages: Java, Go, JavaScript, TypeScript, Python

Scripting: Bash, PowerShell

Cloud & DevOps: AWS (EKS, EC2, RDS), Docker, Kubernetes, Terraform, GitHub Actions

Backend: Spring Boot, Node.js, Express.js, Django

Databases: PostgreSQL, MySQL, SQLite
